

Class conferencing

A unique combination of advanced capabilities for interactive live broadcasts and recording rich content.

The solution is suitable for auditoriums, classrooms and the lecturer's computer.

Streamitup offers a dedicated video conference solution for a wide range of educational needs. Live lessons between remote classrooms have unique requirements, which differ from video conferences used in the business sector. Therefore, Streamitup developed a dedicated video conferencing service for the education sector.

- **Full interaction with the remote classroom**

The remote classrooms can view and actively participate in the lesson using two-way video communication:

- ✓ In the remote classrooms, the lesson can be displayed by 2 high resolution screens:
 1. Showing teacher and board
 2. Lesson's presentation
- ✓ The teacher can see and hear the remote students, therefore can teach them as if they are in the classroom.
- ✓ The students can also use the collaboration tools: E-notes, chat, polls, virtual smartboard.
- ✓ The teacher can attach files to the

- **Easy to Operate**

The system offers varied automation levels, from manually operating by the teacher to full automation.

- **Information Sharing**

The system enables transfer and sharing of all information between sites, including video, audio, presentations, applications, movies and documents.

All information is displayed in FullHD quality, providing a high quality visual and audio experience.

- **Automatic recording**

Live lessons are recorded, stored and accessible via the EDU-Tube from any place at any time.

- **Expand classroom boundaries**

Students can view the live lesson anywhere they are, from any device
