Automatic Recording

A unique combination of advanced capabilities for recording lectures and implementing live meetings for corporates

An end-to-end solution for automatic recording of meetings, including video, audio and presentation.

- ✓ The Streamitup Light software is installed on the presenter's computer, any microphone and camera can be used for up to Full HD resolution.

- ✓ The system will automatically:

    - Record: video, audio and the computer desktop,

    - Generate a visual index of the meeting,

    - Add the meeting content to the relevant channel in the cloud and will be available for immediate viewing by means of the CMS.

- ✓ In-Video-Search enables searching any content within videos.

Making the Data Channel Content Accessible

The need for creating an updated video database of meetings and discussions within organizations has become a standard practice. Streamitup Light delivers an optimal solution combining automatic operation, Full HD recording that includes video, audio and the speaker's desktop, all at an affordable cost, which facilitates the installation of many rooms.

Easy Operation

The system in the discussion rooms, which is controlled directly by the Streamitup management system, automatically synchronizes the various data sources, such as video, audio, presentations, files and links. Then it feeds them to the Data Unit generated on the appropriate content channel.

Data Sharing

All content can be accessible via the Organizational and/or the Streamitup Portal.

Video, audio, presentations, applications, movie clips and documents are displayed in parallel, in a synchronized and high-quality manner. The speaker can integrate files for downloading and links to external content.

Virtual Forum

Each of the viewers can add his own comments based on the original content, both at the time of recording and subsequently. Every comment is synchronized to the appropriate point in time of the video content. The author of the comment can choose to share it with the other participants in the course, or to leave it private. This capability facilitates implementing a synchronized discussion based on recorded content, efficiently and rapidly.

- The Streamitup management system facilitates a hierarchical and convenient specification of the data channels in an organization, as well as control of the definition and documentation of the content and live meetings.

- Access to online live meetings and afterwards is accomplished via the Organizational Data Portal or the Streamitup Portal or by a single click from an email invitation.

- Viewers connect to their personal accounts in the organization's CMS anywhere using any device.

- The viewer is presented with a list of selected recorded meetings.

- After choosing the desired meeting, the viewing interface is displayed.

- During the recording the system automatically generates a visual summary of the lesson. This summary facilitates immediate access to points of interest and a rapid glimpse at the contents of the entire lesson.

- After the meeting, each participant can connect to his personal account, view the meeting, note his comments in the digital notebook and can share them with the other participants in the meeting.

- Presentation content will be automatically searchable via the Streamitup In-Video-Search technology.

- ✓ This solution can also be upgraded to: Bi-directional live broadcast for the purpose of an interactive meeting. It is useful for large campuses and/or distant campuses.
- ✓ Unidirectional live broadcast of a meeting when the conference room is not large enough.
