

# Video for Education

Video is one of the best ways to share ideas,  
thoughts and knowledge

Streamitup video platform for education - EDU Tube – delivers complete interactive, personalized and efficient learning environments. It enables educators and students to automatically create and share rich video content and to turns it into interactive, personalized and efficient educational material. Video content is handled automatically by Streamitup EDU Cloud, content is processed and becomes searchable and tagged. Students and educators can search and find spoken words, text from presentations, and user comments, embedded within the videos.

The Streamitup platform can be integrated with the institution's Learning Management System (LMS) or can be used as a stand-alone solution. This software is suitable from the individual educators, to any - sized educational institution.

**EDU-Tube** – Aggregate, manage, and share the institution's video content. EDU-Tube enables sharing of multi-source video content, documents, user notes and presentations. It also supports the broadcast of live events, Webinars, and chats, and enables users to create video content from any device. EDU-Tube can also be connected directly to A/V - equipped classrooms. Advanced learning tools enable collaboration within a classroom in addition to recorded and remote live lessons. Real-time analytics provides educators with insight into the learning process and progress of each student over the course of the semester. This information is analyzed from detailed statistical data based on how students use the application. By using these insights, educators can make learning more interactive, personalized and efficient.
